

The 15-Minute Integration Auth Risk Check

Six checks in Setup that show whether any integration in your org will stop signing in on Salesforce's upcoming dates.

The dates (as published by Salesforce, 28 Oct 2026)

Date	Change
4 Nov 2026 (production; sandboxes from 21 Oct)	Refresh tokens unused for 30 days expire (rolling enforcement)
30 Nov 2026	OAuth device flow works only on local External Client Apps with a localhost callback
1 Dec 2026	SOAP API login() requires the Use Any API Auth permission
15 Dec 2026 sandboxes / 31 Jan 2027 production	SOAP login(): token required from broad IP ranges; disabled in orgs with no use in 6 months
20 Feb 2027	OAuth username-password flow and user-agent / hybrid user-agent flows retired (no opt-out)
Summer '27 (day not yet published)	Connected Apps reach end of support; SOAP login() retired in API 31.0–64.0

The six checks

- ☐
1. Password-based OAuth logins. Setup → Login History . Add the **Login Subtype** column to the view and look for **OAuth Username-Password**. Each Application listed is an integration that **breaks on 20 Feb 2027**. Salesforce's own query:

```
SELECT Application FROM LoginHistory WHERE LoginSubType = 'OAuth Username-Password'
```

3 min
- ☐
2. Retiring browser and device flows. In the same view, look for **OAuth User-Agent**, **OAuth User-Agent for Hybrid Apps**, **OAuth User-Agent with ID Token** (retired 20 Feb 2027) and **OAuth Device** (restricted 30 Nov 2026).
 2 min
- ☐
3. SOAP API login() callers. Login History rows with Login Subtype **SOAP API** and API Type **SOAP Enterprise**, **SOAP Partner** or **SOAP Tooling**. The Application column shows N/A, so note the **Username**. These users need Use Any API Auth from 1 Dec 2026, and the clients must move off SOAP login() by Summer '27.
 3 min

☐ **4. Rare jobs on refresh tokens.** Filter Login Subtype on **OAuth Refresh Token**. Ask: does any of these run monthly, quarterly or yearly? If a refresh token sits idle for 30 days, it expires and the job fails until someone signs in again.

3 min

☐ **5. Connected Apps you'll need to migrate.** Setup → App Manager , sort by **App Type**. Count the rows marked **Connected**. Apps from managed packages are the vendor's job, so list them and ask. Your own apps can usually move with **Migrate to External Client App**, which keeps the consumer key, secret and refresh tokens.

2 min

☐ **6. What your org still allows.** Setup → OAuth and OpenID Connect Settings . If **Allow OAuth Username-Password Flows** is on, something may still rely on it. Don't turn it off in production yet: test in a sandbox first.

2 min

Score yourself

Result	What it means
● Any hit in 1-3	Act this month. Name an owner for each integration, ask vendors for their supported OAuth flow, and plan cutovers well before 20 Feb 2027. Late January is a sensible internal deadline.
● Hits in 4-5 only	Plan this quarter. Fix rare refresh-token jobs now, and schedule Connected App migrations before Summer '27.
● Nothing found	Login History only covers 6 months. Check yearly and disaster-recovery jobs with their owners before you call it done.

Want the full project in one download? The **Salesforce Connected App Retirement Kit** includes an inventory workbook that scores risk automatically, 20 discovery queries with a read-only CLI script, a decision tree for choosing the replacement, five migration runbooks, cutover and rollback checklists, and email templates for owners, vendors and change approval. Single-Org \$49 · Consultant \$149. [Get the kit: techjoe2.gumroad.com/l/cwzzb](https://techjoe2.gumroad.com/l/cwzzb)
